

ENERGY MANAGEMENT SOFTWARE

Real-time energy consumption supervision

hall hand hall her

Energy dashboards adapted to each user

Tables and graphs to analyze the Energy Performance Indices (EPIs)

Control of energy performance for ISO50001, HQE, BREEAM and LEED projects

hundmill

ENERGY MANAGEMENT SOFTWARE Supervise – Analyze – Control – Share Alert – Archive – Exchange

Multiple functions which are quick and easy to learn, using web pages with optimized ergonomics Save time for reflection and action with periodic data retrieval, generation and automatic distribution of analyses and alarms, etc.

Scope of analysis and action controlled by the users, with real-time updating of customized dashboards

Energy reference supervisor HQSE expert Maintenance manager Financial director Site manager

Each user can design their own customized dashboards

Energy reference supervisor, HQSE expert, estate manager, financial director, etc., with E.online $^{\circ}$ 3:

Provide analyses of the Energy Performance Indices for your energy reviews (ISO 50001)

Contribute detailed data as evidence of improvement/deterioration of energy efficiency

Receive alerts and quickly identify any drift of consumption on key areas

Set achievable targets for improvement and savings on the basis of a history and detailed data

Allocate energy spending by cost centre

Monitor your buildings' energy performance (HQE, LEED, BREEAM)

E.online[®] **3**, a tool designed to evolve with your requirements

MONITORING – SUPERVISION

Display the measurements and meter data in real time Check the consistency of the measured and displayed data

ENERGY ANALYSIS TOOLS

Create analyses using a library of preconfigured tables and graphs

Customize the analyses according to the scope of responsibility

CALCULATIONS – VIRTUAL METERS

Calculate the EPIs and virtual meters using preprogrammed formulae

Allocate consumption by energy usage, cost centre, etc.

+ -× ÷

CONSOLIDATE – CHECK

The remote-retrieved data are available in real time for analyses and alarms

Erroneous data are identified automatically

7 to 15% consumption savings Observed by the specialist organizations according to feedback on active use of an EMIS .0,

Customize the dashboards to fit your scope of action View the alarms log in real time

Apply energy models to the meters, virtual meters, etc. Receive targeted alerts from your scope of action

ALARMS – ENERGY MODELS

REPORT SHARING

DASHBOARDS

Distribute customized analyses automatically by email Receive analyses targeted on your scope of action

ARCHIVING – DATA EXCHANGE

Store historical data covering more than 10 years Access the MySQL database via SQL connectors

> **Licence-based solution** Limited to a single, controlled purchase with no long-term subscription fees The confidential data are sanctuarized inside the company

Energy Management Information System (EMIS) ENERDIS, an acknowledged and long-established player

EXPERT

Our experience serving your project

Accompanying you from definition of your metering and measurement plan through to implementation of the software

Proposing solutions and services suitable for the most demanding sectors of activity (industry, infrastructure, tertiary, etc.)

Preliminary technical audit Metering and measurement plan Definition and supply of metering, measurement and communication equipment Configuration of the equipment and verification of the installations Configuration of the E.online®3 software User training Maintenance contract Remote maintenance Long-term monitoring of the installation

Technical specifications

Web application (Firefox, Google Chrome, Internet Explorer)

Installation on server (multi-station version) or dedicated PC (single-station version)

Server version: Windows Server 2008 R2, Windows Server 2012 R2

Single-station version: Windows 7, Windows 8, Windows 8.1, Windows 10

Database management system: MySQL

Capacity: Several thousand metering and measuring devices Several hundred users

Installation possible on virtual machine (e.g. VMWare)

Possibility of installing the database, the remote data-retrieval engine and the web application on different machines

Mechanisms for periodic, automatic backup of the data and configuration parameters

Immediate restoration of an operational system from the backup

Upgrade by simple executable patch

Maintenance and remote maintenance contract on request

Software upgrading (number of devices and users, options) by means of a simple licence key
